AI-BASED CONTRIBUTIONS AND CONCERNS IN EDUCATION SYSTEMS

Ali Khorsandi, PhD.

President, IRPHE; Associate Prof. of Education at ATU

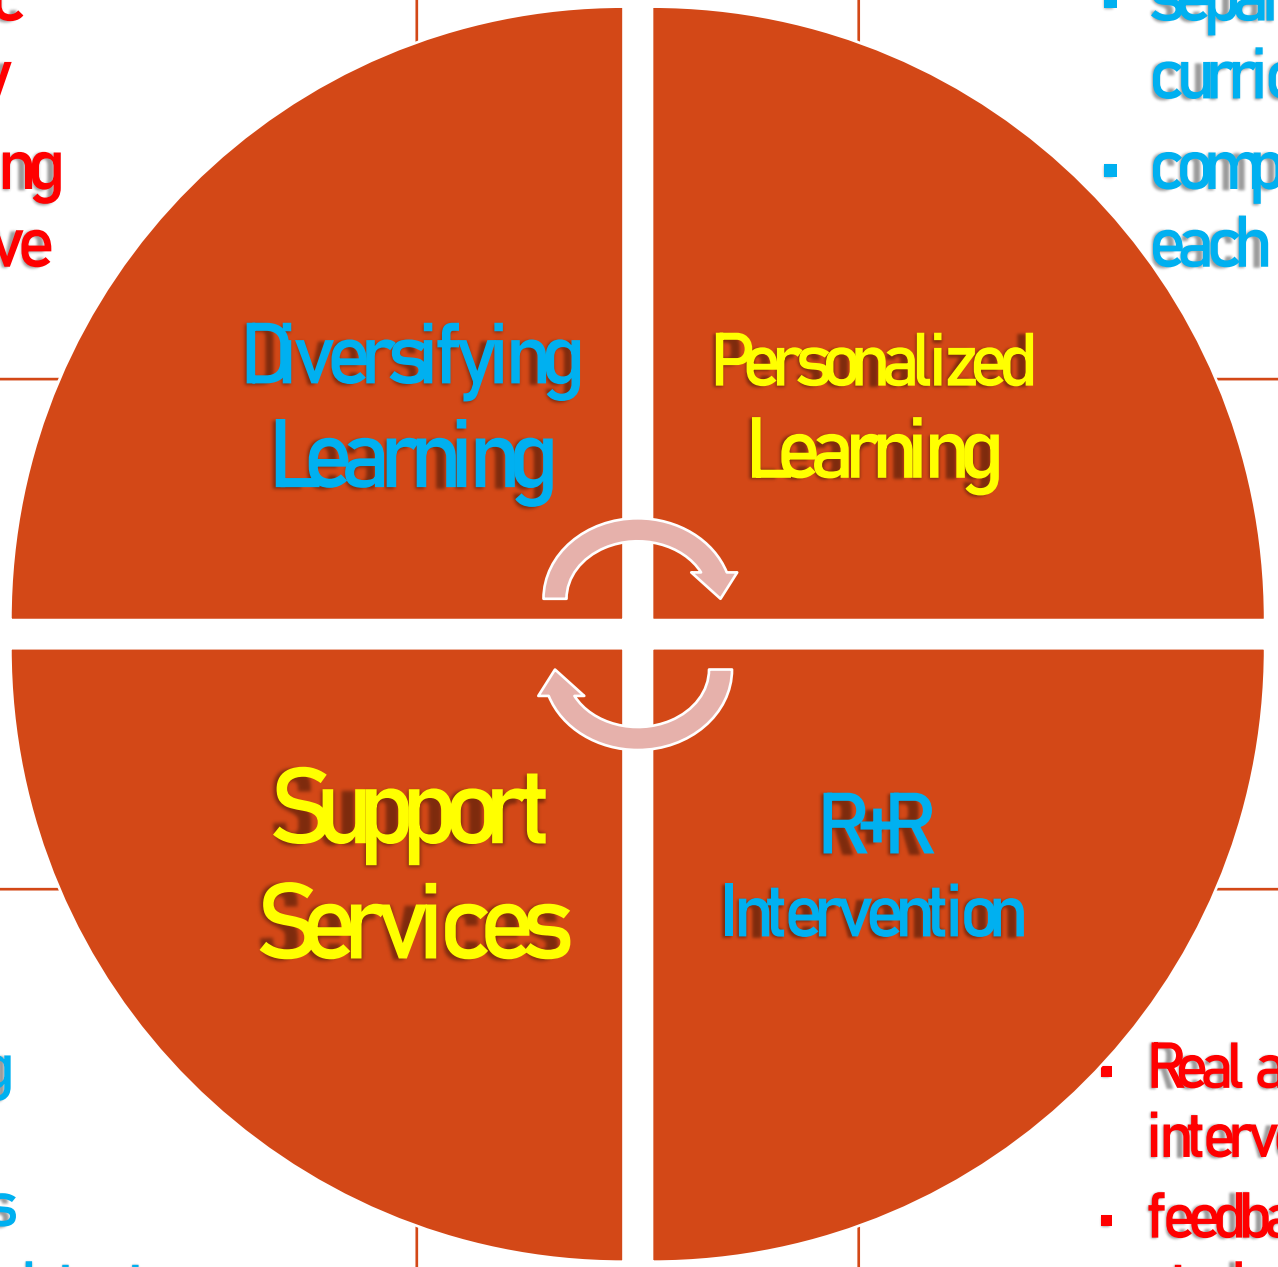
MAIN QUESTIONS

- Why are teachers and professors turning to artificial intelligence?

- What are educational leaders' main concerns regarding artificial intelligence?

- linguistic diversity
- generating innovative ideas

- separate curriculum
- competence of each student



- Improving teaching strategies
- virtual assistants

- Real and rapid intervention
- feedback to students

MAIN CONCERNS

Explicit Impacts	• More Cheating • Human touch Reduction
Implicit Impacts	• Singularity • Dependency
Right Ways to Deal with AI?	• Policy of Balancing • Limiting AI Capabilities

FINAL REMARK

- The main issue of artificial intelligence in terms of educational policy is the need to invest in artificial intelligence
- In 2021, the world invested $100 million in artificial intelligence. This year, it was $230 billion, and it is expected to reach $2 trillion in the next 7 years, and by 2045, investment will be 20 percent of countries' gross domestic product. For example, the UAE established the University of Artificial Intelligence in 2019. This year, it has become the 30th best university in the world.
